EDUCATION

Rutgers University New Brunswick, NJ
Bachelor of Science (B.S.) in Computer Science & DCIM Minor May 2027
Coursework: Introduction to Computer Programming, Video Game Design, Web Design I, Web Design II, AP Computer Science Principles Mobile, Introduction to Computer Science, Data Structures, Discrete Structures 1&2, Computer Architecture, Data Management for Data Science, Principles of Information and Data Management, Systems Programming, Principles of Programming Languages

SKILLS

- **Development:** Python, HTML, C, Java, CSS, C#, Flutter, Dart
- **Software:** VSCode, Github, Unity, Visual Studio, MIT App Inventor, Scratch, Google Sites, JupyterHub,Android SDK, iOS SDK, Git, Android Studio
- **Certificates**: Hackathon Winner, Python Bootcamp Certificate, Amazon Certificate, Seal Of Biliteracy, EOF Scholar, Chemistry Scholar, Top 3 in CS class (Highschool)
- **Languages:** English, Spanish, and Beginner Portuguese

EXPERIENCE

Study Weapon | Founder / Full Stack Engineer Roselle, NJ
Student Productivity Platform | Next.js 15, TypeScript, Serverless APIs, Vercel, GitHub CI/CD May 2026
- Architected and launched a full-stack student productivity platform using Next.js 15, TypeScript, and Tailwind CSS, delivering 15+ free tools across AI writing, GPA calculation, PDF processing, and file conversion with zero authentication friction.
- Engineered a fully client-side PDF processing suite using pdf-lib and Canvas API, eliminating server-side compute costs and enabling unlimited browser-based document manipulation with no backend infrastructure.
- Integrated Google AdSense for automated ad monetization and deployed the platform on Vercel with GitHub CI/CD, achieving sub-60-second deployment cycles and 99.9% uptime on a $0 infrastructure budget.
- Designed and implemented a modular multi-tool architecture with dark mode, responsive mobile navigation, and SEO-optimized page structure, reducing bounce rate through tool discoverability across 4 categorized sections.

Hackathon Winner - Fiserv x Rutgers Newark Hackathon Newark, NJ
Digital Wellness Analytics App April 25, 2026
- Worked with a 3-person team to win 1st place by creating a location-aware wellness platform that analyzed dwell time and movement behavior to generate personalized recommendations.
- Architected the application using scalable routing and reusable service layers to accelerate feature integration during the competition.
- Delivered a fully functional Android/iOS MVP and presented the system design and product vision to Fiserv industry judges.

2KD Kitchen Hood Cleaning LLC Kenilworth, NJ
Web Developer & Digital Operations Coordinator February 2026 – Present
- Designed and developed company website, improving usability and maintaining 100% uptime
- Handled customer inquiries and scheduling, responding to 20+ client messages per week
- Supported marketing efforts by maintaining online presence and increasing engagement across platforms.

Marler Enterprises LLC Roselle, NJ
Administrative Coordinator June 2023 – Present
- Entrusted with access to confidential banking information and logins for all company operations
- Monitored and organized all billing data and information through Excel and records management to best assist company accountant in creating company budget
- Coordinated travel arrangements and ensured that all tickets/itineraries/ documentation were well prepared and easily accessible for executives.

Amazon Sortation Center Carteret, NJ
Warehouse Associate June 2024 – August 2024

- Daily processed 32,000 orders with 99.998% sortation accuracy; top 1% in role.
- Worked with team members to ensure work was accomplished in a timely manner, and in accordance with posted Amazon safety and Warehouse Safety/OSHA rules and guidelines.
- Prepared customer orders in a fast-paced environment, ranging from small single orders to complex multiple-item orders

PROJECTS

CloudDrop | Full-Stack Developer | Personal Project June 2026

Cloud File Storage Platform | *React, TypeScript, NestJS, PostgreSQL, Redis, AWS S3, Docker*

- Built a full-stack Dropbox-style file storage platform with React and NestJS, delivering 25+ REST endpoints across authentication, file management, folder hierarchies, sharing, and search behind JWT-protected routes.
- Engineered SHA-256 content deduplication that stores identical files in S3 only once via reference-counted metadata, cutting redundant object storage by up to 100% for duplicate uploads.
- Implemented resumable chunked uploads that split large files into 5 MB segments and reassemble them server-side, enabling interrupted transfers to resume from the last completed chunk instead of restarting at 0%.
- Designed a 3-tier sharing model (owner/editor/viewer) with folder-inherited permissions and accelerated name search using PostgreSQL GIN trigram indexes for sub-second lookups across files and folders.
- Containerized all 4 services (frontend, API, PostgreSQL, Redis) with Docker Compose and automated schema migrations on startup, reducing local environment setup to a single command.
